Binary SHA-256: 8437a1bb68a34e759244665e3c4deb2e565bc843e6ba2d53e46cd6e2a724f451

Travel date: 2026-11-15 (system local date +3 days).

Environment

```
{
"platform": "Linux-7.2.14-200.fc44.x86_64-x86_64-with-glibc2.43",
"python": "3.13.13 | packaged by Anaconda, Inc. | (main, Apr 14 2026, 06:19:41) [GCC 14.3.0]",
"openssl": "OpenSSL 3.6.3 9 Jun 2026",
"cpuCount": 18,
"timezone": [
"IST",
"IST"
],
"pythonSqliteVersion": "3.51.2"
}
```

The Python SQLite version above describes the runner’s sqlite3 module, not the server. The application bundles SQLite 3.46.1; this is not a runtime server-version measurement.

Method and scope

isolation: Fresh TemporaryDirectory under /tmp, dedicated SQLite DB; inherited RTRS_* settings removed; ephemeral ports; no production DB

transport: Actual server subprocess and localhost HTTP/HTTPS sockets; no mocks

load: 20 search + 20 two-passenger bookings, separately, four concurrent clients, fresh connection per request, nearest-rank p90 <3 seconds each; connection through full response latency

recovery: Controlled restart and abrupt process kill/relaunch after committed writes, same database plus read-only SQLite integrity check; not power-loss or interrupted-transaction durability

credentials: Random runtime password; request bodies and auth headers never logged by runner; response secrets redacted

Measured performance

Operation	Requests	Clients	p90 (s)	Max (s)	Threshold
search	20	4	0.002256	0.002906	<3 s
booking	20	4	0.006130	0.007966	<3 s

Detailed expected/actual bodies, raw latency samples and per-step timestamps are preserved in raw JSON evidence. Check IDs below identify the corresponding 1-based entries in its steps array.

Failures and limitations

No failed assertions observed in executed checks.

Small local load only; no sustained stress or internet latency conclusions

TLS uses a temporary self-signed trust anchor; does not validate production certificates

Admin audit API records booking events; train changes verified via read-back and restart

No UI, screenshot, coverage or unit-test results claimed by this independent runner

Check results

Check ID	Name	Status
SV-001	Start HTTP server	PASS
SV-002	Register owner@example.test	PASS
