Unit Test Report

Generated 2026-11-12T16:45:25.898236+00:00. Application source: 6b5464298c949806ebba0b7bd1d903c962b5255d.

Environment: Linux-7.2.14-200.fc44.x86_64-x86_64-with-glibc2.43; g++ (GCC) 16.2.1 20261029 (Red Hat 16.2.1-3); gcovr 8.8.

GoogleTest executed **201 tests** in **49 suites**: **0 failures**, **0 errors**, 0 disabled; reported duration 1.715 seconds. This binary includes unit, service, API integration, concurrency and search performance tests; the total is not a count of distinct Test Plan cases.

Built freshly with CMake Debug, GCC and RTRS_COVERAGE=ON. Evidence: GoogleTest XML, CTest JUnit, system validation. Test hashes use reduced PBKDF2 iterations for speed; the system runner separately exercises the executable configuration.

Reproduction

Run python3 scripts/submission/collect_reports.py --build-dir build-submission --jobs 4 with CMake, GCC, OpenSSL, gcovr 8.8 and Python available. An initial dependency download requires network access.

Interpretation

These results validate the selected scenarios on one local Linux machine. They do not establish production readiness, hosted deployment, penetration-test certification, or human UAT acceptance. See the System Validation Report and submission checklist for remaining human actions.
